

## confessional (to confess)

**Inventor:** ~????  
**Year:** ~????  
We guess the NSA/CIA works with the principle of seduction. He gives the people the opportunity to get money if they sell their soul, or if they sell their soul just a little bit. With **BigData** and 100 Years of DataRetention **they would know about the smallest sin**. Thy used m66 Card as Scapegoat.  
One working hack to work around this principle is to **confess** what you have done. Me for example I drove drunken car and did other things, so tried to turn myself in, but they said that this sins were expired. From that point in time the NSA/CIA System couldn't blackmail me with this sins anymore, unfortunately they then began to shoot against my sexual integrity.  
**Consumer Note:** **Nun not included in all use cases.**

## Weed

**Inventor:** God  
**Year:** 100K  
Releases serotonin / dopamine, the unfiltered smoke is bad for the lungs, the arteries... It is currently an illegal self-medication. From medical point of view without consulting a doctor it is not the best idea to smoke weed. Because of the sedation the processing of consolidation of the things experienced in his live is skipped, which will lead later into a psychosis and reduces the resilience of the individual. Often used to obfuscate illegal human experiments for example t\* cards. Can have a pain-relieving effect. Maybe helps against Epilepsy. Consumers show more ignorance that can help in some stress situations (but consider m49, m50 card). Additional the person that smokes weed seems to focus more on the non-verbal communication.
