

BRODMANN AREAS

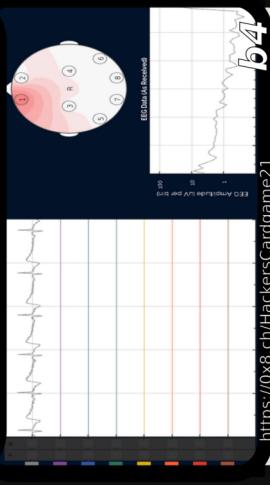

Brodmann's cytoarchitectonic map (1909):

<https://0x8.ch/HackersCardgame21>

Inventor: God

Year: B.C.
Brodmann areas were originally defined and numbered by the German anatomist Korbinian Brodmann based on the cytoarchitectural organization of neurons he observed in the cerebral cortex using the Nissl method of cell staining. Brodmann published his maps of cortical areas in 1909,[1] along with many other findings and observations regarding the general cell types and laminar organization of the mammalian cortex. The same Brodmann area number in different species does not necessarily indicate homologous areas.[2] A similar, more detailed cortical map was published by Constantin von Economo and Georg N. Koskinas in 1925.[3]

EEG / FLASH QFIRE?

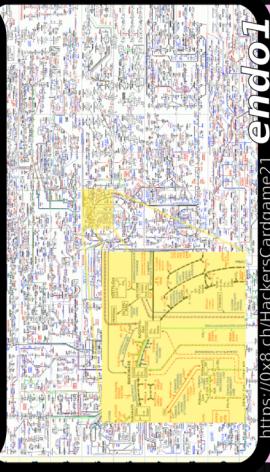

EEG Data Received:

<https://0x8.ch/HackersCardgame21>

Inventor: Satan

Year: -1900?
I did not find any image from such a device. In Psychiatrie Königsfelden (P4) there is an EEG installation. They measure your EEG with electrodes and in the same time it produces flashlights with a stroboscope. **The flashlight cause peaks on the EEG!** Unsure if that was "service" of the mental institution and they just tried to find out my perceptual threshold. The problem was that someone used this scene on the street or in my car and also flashed me, that revictimized the **scene in the Mental Institution and made me massive paranoid**. I dont knwo if psychological terror on the street was intentional or this was that just that eg the CIA stole the data and abused it against me. Question would be, what could one do with massive blade-server & IEEE1588, eg. t1 card and a techno-party where many young people go to.

ENDOCRINOLOGY

Endo1

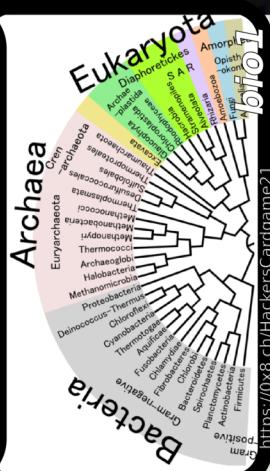

Inventor: XXXXX

Year: -?????
The (neuro-) endocrine system is highly complex. So one can influence behavior and health with homeopathic doses of chemical substances, but also with behavior or radiation. For me it is complex to understand and im not sure if a doctor in endocrinology completely understands what would happen when you change just a small element in the complete system. If there is such a AI that helps the doctors to make patients healthy again it would maybe also submit to attacks. So hopefully some doctors are hackers to, I dont know a lot about medicine, but when i asked @unibas if they had a look at the insulin pumps they recommend to their doctors and students they did not answer. That was a few years ago when CCC talked about such things.

to find common ancestors. In my opinion people tend to focus to much on their genetic material, but knowing that we have lobsters as common ancestors and that they usually fight against each other to get the girl-lobster would be of use. mankind calls itself "intelligent" but follow these old Lobster habits is maybe not that intelligent! Sorry German: https://www.youtube.com/watch?v=H6Z36Z_LCwU#t=30:00 (~30:00)

A mad "scientist" maybe used swiss mental institutions and the #Vereinigungskinder for genetical engineering. If one of the victims would find out that this would be true it would maybe have a lot of trouble, they also would like to know what sort of genetical material works best with eg t1 card

The nucleus accumbens (NAC or NAcc), also known as the accumbens nucleus, or formerly as the nucleus accumbens septi (Latin for nucleus adjacent to the septum) is a region in the basal forebrain rostral to the preoptic area of the hypothalamus. The nucleus accumbens plays a lesser role in processing fear (a form of aversion), impulsivity, and the placebo effect. It is involved in the encoding of new motor programs as well.

Not sure, if this text from en Wikipedia is correct, having a medic for that would be great.

Brodmann areas (esoteric interpretation)

Like the brain is split up into different areas, content in the brain is also split up into knowledge areas. Maybe in conjunction with b5 card that stimulates specific parts of the neocortex.
My brain has some sort of black holes, c08 card is one of them. Things that are to personal to talk about, things that are private, things like abuse, rape, violence. Satan seems to plant vectors to all other areas that point to that traumatic event to make me silent, to stop me from analyzing data and situations, to stop me from warning others from things satan did to me. this is maybe sorted like some sort of personal libraries index where each person has his own subset of knowledge areas. Different Subsets of the knowledge, different world-views, maybe intentionally antagonizing (m50)

NUCLEUS ACCUMBENS

The amygdala also corpus amygdaloideum: Latin, from Greek ἀρνητικόν, is one of two almond-shaped groups of nuclei located deep and medially within the temporal lobes of the brain in complex vertebrates, including humans. Shown in research to perform a primary role in the **processing of memory**, decision-making, and **emotional reactions**, the amygdala are considered part of the limbic system, **NOT VERIFIED BY ME SO FAR!!!**
Development / processing of anxiety, fear and anger, "fight or flight" - understanding or manipulating reaction, "rage", possibly
