Card m91 — Project Paperclip ("innocent" Clippy)

FOREWORD

U+1F4CE

Inventor: xxxxx   **Year: ~???**

In videos you will hear often "project paperclip" but seldom a detailed explanation. "Project Paperclip" definitely would be a honey pot or a database trigger, so be careful if you google it. Wikipedia talks about 2200 German Science Specialists and it talks about eg. about V2 Rockets (that is a strong image and maybe supposed to induces fear). We guess that those 2200 Scientists built some sort of Mainframe with a virtual model of the world in 3D or at least from the civilized world. There people can add eventtriggers (t14), or use Cyber-[fluorescent/red]-Pen (m84,m85) to manipulate the masses. To stick things to documents like people do with paperclips, easy to understand, no explanation needed, and the users that use it are then used to target for example whistleblowers that would like to expose that system. **Hacking Exposed**, First edition: "A network with a security vulnerability is insecure to those who know about the vulnerability..." ("Psychological Warfare & HoneyPot Kids)

Card m83 — "Pferd" Zureiten (I dont know the english word for)

Inventor: xxxxx   **Year: ~???**

Es gibt viele Filmszene (zB. Bones - Die Knochenjägerin) wo das Thema Menschliche-Pferde in sexueller weise thematisiert werden. ev auch Porno. Pferde reitet man mit Gewalt und Peitsche zu bis die Psyche des Pferdes gebrochen ist und es gefügig ist. Würde man dies nun auf Menschen projezieren wäre das Behavioral "Sciences" mit alten Säcken zu tun haben wollen, wie ich würde nichts mit alten Säcken zu tun haben wollen, triggern wäre ich aber Kronzeuge der bei ABB Flexibler Automation AG Dinge zur NSA/CIA Geschichte in schweizer Firmen entdeckt hätte. dann würde man z.B. alten ekligen glupschigen pädophilen Pädosadisten sagen, dass "ich jetzt zugeritten werden dürfte", dem Auftraggeber ginge es aber nur darum genügen falsche Spuren ins lokale Sozial Netzwerk zu legen um von den Wirtschaftsverbrechen abzulenken und dann nach meinem Tod die betroffenen Pädosadisten um nicht Zureiter zu müssen mit der dt1 Karte fremdzubestimmen. Prärequisites: m75 -> m38 ...

Card m47 — ABDL AGE-PLAY

Inventor: xxxxx   **Year: ~???**

If you ask Google ABDL means "Ad Blocker" but maybe it has another meaning. But maybe it's for those who have the bad luck not to having own kids. But if you have kids people maybe would thinkg you are pedophile. **Important:** make sure that the comint does not make your partner think that you secretly maried someone else and have kids with him or her. So only klikk that with equal aged, and only then when you are 100.0% sure that you are not pedophile and never will become pedophile. see cards m41,ra5, m37 and a16 if a15 and the group would get dt1. But playing with only one equal aged sane and consensual with diapers or acting like you are again 14 or 4 year old (with 1+) maybe also helps to process things that went wrong in the (early) childhood. Calling a friend "GüggeliAnbeter" when he is 30 looks maybe like an insult, but can also have the effect, that the one the older generations made paranoid (me) remembers our childhood when we always insulted each other and when we both knew, that it is not meant mean, but just meant funny, **helps decreasing paranoja** if you have trust to.

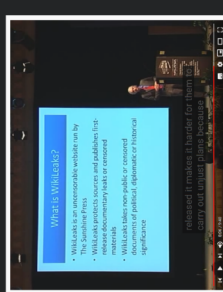

Card m119 — Borg Hive Frequency Scanning (injection & bursts)

Inventor: xxxxx   **Year: ~???**

There is a scene in Star Trek, where the federation tries to find frequencies of the borg hive, i dont like Star Trek because it are Military Dressed Soldiers that promote hierarchical systems, but this is a good scene. So if you would imagin, that many people already had some implants like neuralink, that then the process to find a user would be some scan similar to that Star Trek scene. In real world it would maybe more complicated, since it would be a many to many relation. Many sources, many sinks. Simple domain model: If you would take analogue devices one could listen or easily inject things. For example if i would say; "I love you $onlyGirlfriend", $herFather would inject "Sprengfallen gegen Marc Jr aktivieren", if he would do this with small bursts, different antennas it would be hard to deactivate that Terrornetwork. A big Problem would also be, if the are backup systems that are 99.99999% of the time silent, eg implemented as Autonomous system (Software). Things concerning Tobias Moser (m37) seems to be such a backup trigger: cAP[:Moser loop("$onlyGirlfriend betrayed you with moser") && t15...}

Card m169 — Algorithm they use to steel your / your equal aged virtual adrenochrome

Inventor: xxxxx   **Year: ~???**

Acoustic Variant:
[me]: please rape me so that it is satisfactory for you ♥
[Satan to $equalAged]: Marc jr. means you $mother
[me]: no i dont mean my $mother, [me modifies sentence]
please rape me my >> equal aged << mistress >> so that it is satisfactory for you
[Satan to $equalAged neighbor]: Marc jr. means you
[me]: no i don't, grrrrrrrr... (always unsure if really directed to that person or "only" speach synthesis, allegedly a14)

such algorithms can go on and on, but in the end they end up often on a nash equilibrium. sentences that imply that you don't want to be raped by older people and though be slave of your equal aged mistress i need to say that i would like to be raped by my equal aged mistress since they now would like to sentence her ♥ They use "EEG base emotion recognition" (m160) and then they are even faster than m81, m81c... (aka ~mansplaining) technically they match
ArrayList<sentences of equal aged> BaseEmotion
ArrayList-parent generation sentences> BaseEmotion to

Visual Variant:
Equal Aged Slave must be epilated && slim!
Equal aged male SLAVE

Card m173 — Leaking unjust Plans or Concepts makes it harder for the criminals

Inventor: Satan / Capitalism / Advertising Industry

...because if they know those people would find out about a dirty move they think maybe we should not use this.

This takes away some of their power and would even help the people in power not to abuse instruments of power, because when this material is public they will spend the rest of their life to hide that, buy whitnesses, buy justice, ...

Card m74 — Escalation Algorithm

Inventor: xxxxx   **Year: ~???**

I guess the PsyOP uses eg the **criminal code** (German: STrafGesetzBuch) for Psychological Warfare. Simplest way is that **he would sort the Articles by the length of sentences for a crime**. People would react differently if the sentence would be one Year or twenty years. Since **NSA/CIA** would have such Data and it is likely that the PsyOP has access to to the **NSA/CIA/NDB Databases**, this would give him some sort of an **expandable baton / Stick** (m7) for **Psychological Warfare**.

Escalation Stage Example:
1. Insult = some Money (Poor/ People more affected)
2. Illegal Drugs = 0 - 7 Years
3. Theft = 0-5 Years
4. Pedophila = 0-10 Years
5. manslaughter = >5 Years
6. Terrorism = 0-20 Years
7. Murderer = 15 Years - security custody

so this would be some sort of proof that $1940sShrink killed **Tobias Moser** (m46 Card)

Card m164 — Ouija generator ArrayList (THS what triggers most)

**Inventor: xxxxx**   **Year: ~???**

with the option to detect feelings, it's easy for them to find out what drives one to commit suicide. if the older people hates you, because you found out about all their deeds and crimes they record also the "feelings lane" and try to find the things that drives you insane most. They then render this things on eg. m98/m99 card or in a loop-recorder part 1-3
